ZETA Homes Modular Manufacturing Facility Tour and Presentation

Please join us for an encore presentation of the ZETA Communities Modular Manufacturing Facility Tour and Presentation. This special encore presentation of the tour will feature the production of a net zero energy project.

Part of America's building tradition for decades, prefabricated modular construction is poised to change the design and construction industry. As the market for zero energy and high-performance buildings continues to grow and as jurisdictions adopt sustainable building standards, prefabricated modular construction holds the promise of reduced waste, energy-efficient designs, and improved manufacturing and construction efficiencies. A leader in the prefab market, San Francisco based ZETA Communities produces net zero energy multifamily housing and mixed-use structures for sustainable communities from its Sacramento facility, and has completed one of the first prefabricated net zero energy townhome projects in the nation, achieving LEED Platinum certification in the process.
